Boxboard

This is an app for task management as To Do board, you can create new cards and move around by using the buttons or dragging and dropping

Start 🚀

You can access the app in [this link](#)

Front-end code [Click here](#)

Back-end code [Click here](#)

End Point [Click here](#)

Database 📋

Use a table for the project at MySQL Database given by the university, the table contains one object "Card", this object has an unique id (String), title (String), description (String), date (String), and status (String). A simple structure is better for maintenance and understanding.

Card	
id	String
title	String
description	String
date	String
status	String

Finally, the operations supported by the back-end are create, read, update and delete.

Tools 🛠️

Menciona las herramientas que utilizaste para crear tu proyecto

- [Js](#) - Vanilla Js
- [Maven](#) - Dependencies manager
- [Bootstrap](#) - Styling

- [SQL](#) - Data Storage
- [Heroku](#) - Back-end deployment
- [Github](#) - Front-end deployment
